OLEKSII SHAFRANSKYI

FULL-STACK SOFTWARE ENGINEER
LinkedIn
o.o.shafranskyi@gmail.com

SKILLS

LANGUAGES

- C#
- TypeScript/JavaScript
- SQL
- Dart

BACKEND

- .NET Core / .NET Framework
- ASP.NET Core Web API
- Entity Framework / EF Core
- LINQ
- Dapper
- Hangfire
- SignalR

APIs

- REST
- GraphQL (HotChocolate, Hasura, Apollo)
- gRPC
- OpenAPI / Swagger

AI / LLM INTEGRATION

- OpenAI API
- Prompt engineering
- LLM-powered features

DATABASES

- MSSQL
- PostgreSQL
- Redis
- MongoDB

CLOUD

- Azure (App Service, Functions, Key Vault, App Insights, AD/B2C, DevOps)
- AWS (Lambda, ECS, RDS, S3,

SUMMARY

Senior Full-Stack Software Engineer with 7+ years building scalable, end-to-end web platforms across regulated and enterprise domains. Backend-focused, with deep experience owning system architecture, API design, and cloud infrastructure: building .NET Core / C# services, REST and GraphQL APIs, and event-driven microservice systems deployed across Azure, AWS, and Google Cloud, backed by strong data modelling across relational and NoSQL databases.
Recently designing and shipping LLM-powered features (OpenAI) with resilient fallback architecture, while collaborating closely with cross-functional teams- mentoring, reviewing code, and driving technical decisions from concept to production.

WORK EXPERIENCE

Senior Software Engineer | February 2026 - ongoing

NDA Project

A B2B telecom-compliance platform that automatically clears legitimate business numbers wrongly flagged as spam by major carriers. It ingests flag-scan data, opens and tracks remediation tickets against carriers, and manages the appeals process end-to-end, with a partner-facing API and real-time webhooks giving external systems full lifecycle visibility into every ticket and number.

Main responsibilities

- Design and build the platform from scratch, owning the architecture and all technical decisions
- Develop REST endpoints for resource management, high-volume data ingestion, and ticket lifecycle reads
- Build an event-driven webhook system with signature verification, retries, and replay support
- Build customer-facing and internal admin UIs for ticket and per-number status, activity logs, and carrier communications
- Handle multi-tenant auth, structured error handling, and soft-delete auditing
- Design and ship an LLM-powered drafting feature (OpenAI GPT-4o-mini) that auto-generates carrier reply emails and appeal documentation
- Build a customer-facing AI assistant for self-service account queries
- Architect the integration with a template-based fallback path so AI remains an efficiency layer rather than a system dependency, protecting core uptime against LLM vendor outages and cost changes

Tools & Technologies

.NET, AWS (Lambda, SES, RDS, S3, ECS), PostgreSQL, EF, Microservices, React.js, OpenAPI, Webhooks, Azure Graph API, Claude, Copilot

- SES, Cognito, IAM)
- Google Cloud Platform

DEVOPS & INFRASTRUCTURE

- Docker
- Terraform
- CI/CD
- RabbitMQ
- Azure Service Bus
- Elasticsearch
- Grafana
- Kibana

FRONTEND

- React.js
- Next.js
- Redux
- React Query
- RxJS
- Storybook
- Styling (Tailwind, MUI, styled-components, AntDesign, Bootstrap, Fluent UI)

TESTING

- xUnit
- NSubstitute
- Jest
- Playwright

MOBILE

- Flutter

LANGUAGES

- English — upper - intermediate
- Ukrainian — native

EDUCATION

Computer Academy “STEP”

The National University of Water Management and Nature Resources Use, Bachelor’s and Master’s Degrees in Computer Engineering

CERTIFICATIONS

Azure Developer Associate

Senior Software Engineer | 3 months

NDA Project

A global, product-based IT company and an international job search engine that aggregates thousands of job postings from various online sources onto a single platform, helping people worldwide find and apply for jobs easily, functioning as a comprehensive search aggregator for employment opportunities.

Main responsibilities

- Implement and enhance features
- Bug fixing
- Participation in meetings with developers and the product owner
- Performing code reviews and the deployment process
- Monitor and optimize system performance

Tools & Technologies

.NET, Azure, MSSQL, PostgreSQL, RabbitMQ, Elasticsearch, Dapper, Entity Framework, Grafana, Kibana, Microservices, React.js, RxJs, Copilot

Software Engineer | *1 year 3 months*

NDA Project (Metinvest Digital) | Switzerland

The project is a new style of corporate emailing. It uses classic email texting, but adds security to it - messaging is possible only between employees, their groups, etc. This web-based email client includes features such as My Tasks, Business Object Repository, Change History, and an Admin Panel with MS Azure | OTDS authentication. The application provides real-time business object data. Automated processes and integration with the corporate repository reduce human error in storing correspondence and related files.

Main responsibilities

- Development
- Support and bug fixing
- Participation in all meetings with developers and product owners
- Performing code reviews and the deployment process
- Mentoring

Tools & Technologies

.NET Core, Entity Framework Core, React.js, Fluent UI, OpenText, MS Exchange, MS Graph API, Azure (Logic App, Redis, Blob Storage), MSSQL, Azure, RxJS, Rest API

Software Engineer | *1 year 8 months*

NDA Project (Honeycomb Software / Blum) | UK

The complete digital health application development toolkit. The mission of the project is to connect Healthcare excellence with technological innovation, accelerating the transition to a world filled with digital health solutions. The lean team makes it possible to provide high-quality software solutions, aided by specialist health tech design and development experience. The project aims to develop and execute exciting and innovative digital health initiatives.

Main responsibilities

- Building an app from scratch
- Features implementation
- Bug fixing
- Participation in all meetings with developers, designers, and product owners
- Performing the code review and deployment process
- Mentoring

Tools & Technologies

.NET, Entity Framework, React.js + Hooks, TypeScript, PostgreSQL, AWS, Azure DevOps, Azure(AppServices, Blob Storage, Application Insights, Key Vault, AD/B2C), Razor, GraphQL + HotChocolate, Hasura, GraphQL (Apollo Client), MUI + Emotion, styled-components, useContext, Storybook, Playwright, Docker

Software Engineer | *11 months*

NDA Project (Honeycomb Software) | USA

An application to connect farmers' communities in the USA and help them to sell their goods and offer services to each other. Main functionality includes: Chat messages, Weather widget, Advanced search options, Daily prices of goods, News and posts feed.

Main responsibilities

- Building an app from scratch
- Features implementation
- Configure and deploy the app, set up Azure Pipelines
- Bug fixing
- Participation in all meetings with developers, designers, and product owners
- Performing the code review and deployment process

Tools & Technologies

.NET, Entity Framework, MSSQL, React.js + Hooks, JavaScript, Redux, Azure(AppServices, Blob Storage, Application Insights, Key Vault, AD/B2C, Redis), Azure DevOps, SendGrid, SignalR, Redux Thunk, AntDesign, Bootstrap, SCSS, Yarn, Webpack

Software Engineer | *1 year 5 months*

NDA Project (Honeycomb Software) | Norway

Service for renting plots and buildings. It allows users to create and edit rent objects, create tenants, and create and manage contracts between tenants and owners. The system also provides analytical and financial information about the contracts, which is displayed on dashboards.

- **Main responsibilities**
- Building an app from scratch
- Features implementation
- Set up Pipelines, configure, and deploy the app

Tools & Technologies
.NET Core, Entity Framework Core, React.js + Hooks, Redux, PostgreSQL, Azure(App Service, Blob Storage, Application Insights, Key Vault, AD/B2C, Redis), Azure DevOps, xUnit, NSubstitute, Microservices, Redux Thunk, AntDesign, React Bootstrap, i18n, Docker

Software Engineer | *8 months*

NDA Project (Honeycomb Software)

It is a time-saving and efficient internal reporting app with a login page, time tracker, and timesheet that allows tracking work hours across teams.

Main responsibilities

- Building an app from scratch
- Features implementation
- Bug fixing

Tools & Technologies
.NET Core, Flutter, Dart, MSSQL, Entity Framework Core, SQLite, Firebase, Google Cloud Platform, Rest API, Azure DevOps, Azure(AppServices, Blob Storage, Application Insights), Android Studio

Mobile Engineer / Software Engineer | *9 months*

NDA Project

A simple yet convenient ridesharing app where passengers can hail a ride, and independent drivers can charge fares.

Main responsibilities

- Building an app from scratch, bug fixing
- Features implementation

Tools & Technologies
Flutter, Dart, SQLite, Firebase, Google Cloud Platform, .NET, Telegram APIs, Android Studio

Software Engineer | *2 months*

NDA Project

The project is a neat and functional Telegram bot for social questioning, serving as a facilitator.

Main responsibilities

- Building the bot from scratch
- Features implementation
- Bug fixing

Tools & Technologies
.NET, Telegram APIs, Firebase, Google Cloud Platform
